

Sinusoidal Word Problems

p. 350-353

q 6,7,14,

p. 357 & 358

q 4, 6,8 & 9

p. 375

q 15

Nov 30-8:11 AM

14. The diameter of a car's tire is 50 cm. While the car is being driven, the tire picks up a nail.
- How far does the tire travel before the nail returns to the ground for the first time?
 - Model the height of the nail above the ground in terms of the distance the car has travelled since the tire picked up the nail.
 - How high above the ground will the nail be after the car has travelled 235 cm?
 - The nail reaches a height of 10 cm above the ground for the third time. How far has the car travelled?

$$C = \pi d$$

Nov 22-8:22 AM

14. The diameter of a car's tire is 50 cm. While the car is being driven, the tire picks up a nail.
- How far does the tire travel before the nail returns to the ground for the first time?
 - Model the height of the nail above the ground in terms of the distance the car has travelled since the tire picked up the nail.
 - How high above the ground will the nail be after the car has travelled 235 cm?
 - The nail reaches a height of 10 cm above the ground for the third time. How far has the car travelled?

$$h(t) = \sin(d(t))$$
